Advent xt

Mobile handset

Intercom unit

Connects to all types of alarm receiving centre

The Advent xt is an alarm and communication system designed specifically for grouped housing schemes. Used with the Altec range of Telecare Sensors and the optional Ethernet Interface Kit, the Advent xt offers true Telecare facilities. All alarm call and activity data is stored on a local memory card, which can be downloaded locally (or remotely via Broadband) and analysed using Tynetec's Altera Care software. The Advent xt also retains the alarm signalling capabilities of traditional warden call systems to ensure compatibility with existing Alarm Receiving Centre's.

- Digital Speech Processing (DSP)
- Individual Volume Settings
- Message waiting facility
- Supports wireless Telecare & Telehealth Sensors
- Telecom port for local DECT telephone system
- PSTN port for traditional Alarm Receiving Centres
- RS232 serial printer output for event logging
- Real time clock with auto-BST adjustment
- Future proof – compliant with new BT 21CN digital network
- Alarm "location & type" identification e.g. bathroom pull cord
- All system events & Telecare activity is logged with time/date
- Ethernet Kit for Telecare data analysis via Broadband
- Flash memory card to back-up all system data & radio devices
- Simultaneous onsite fire alarm tone and offsite fire reporting
- 4 fully programmable hardwired inputs per intercom
- Zoned calling feature available

Compatible with:

Advent xt Access

Advent xt Apartment Station

The Advent xt Apartment Station is a remote controlled intercom system designed to enable those with limited mobility, the ability to answer a call from the property's door entry system without having to move from their location.

- Advent xt Apartment Stations can be connected to the intercom unit within each dwelling in place of a door entry telephone. When called, the apartment station will ring for a preset time or until the call is answered by pressing the remote control or intercom TALK button
- The direction of speech is changed by holding the TALK button to speak to the visitor and releasing to listen. The visitor can be allowed access by pressing the OPEN button
- The apartment station and remote control have duplicate push buttons to control the direction of speech, release the door lock or select privacy mode
- Only one apartment station can be connected per intercom. If a resident requires the facility to answer door entry calls in a different room then a dual handset must be fitted
- An optional hard of hearing strobe is also available
