Connectix - the 10 gigabit cable engineers

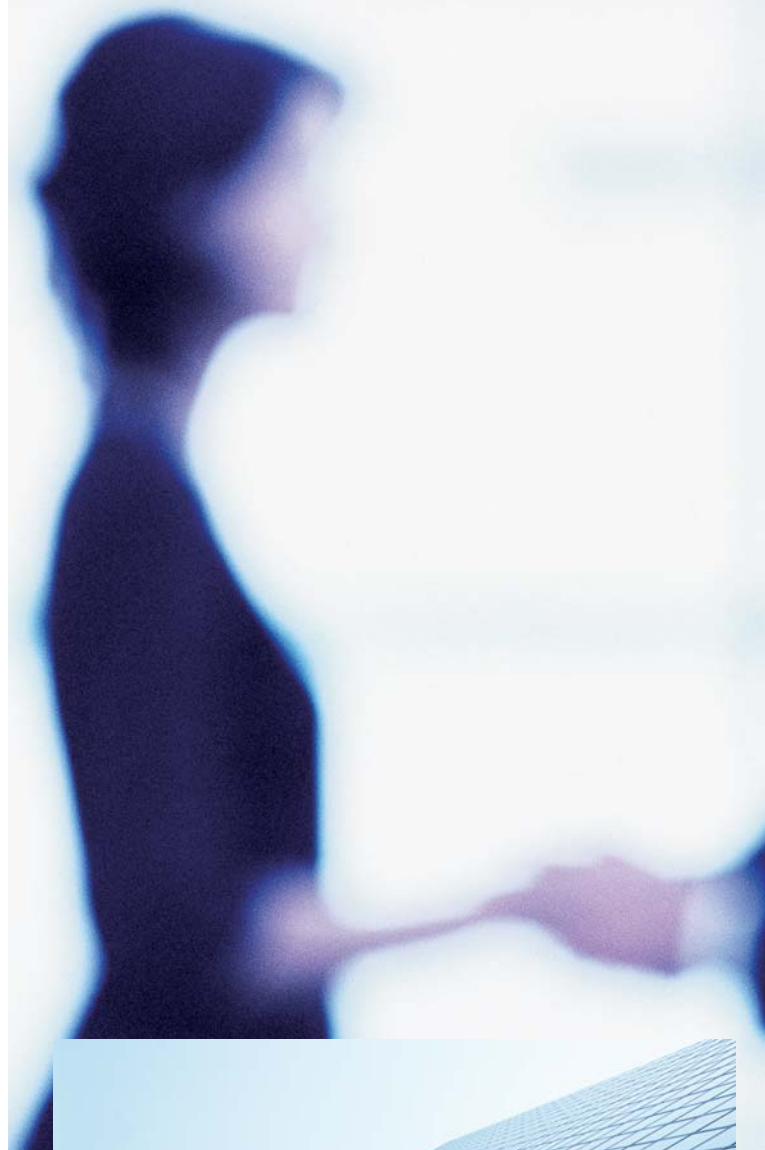

Master 10 gigabit Ethernet, IP, ATM, video and fibre channel interconnection with Connectix Cabling Systems

Connectix is a British based manufacturing company in charge of its own R&D, production and logistics chain. Connectix has been a leading manufacturer of communications products since 1993 and is amongst the top four cable system suppliers into the British market.

Connectix develops, manufactures and supplies advanced cabling solutions for today's 10 gigabit data-driven IT industry. The Connectix range covers Category 5, Category 6 and 10 Gigabit copper cabling, optical fibre and other containment and interconnect solutions. Connectix is renowned for innovation, and our in-house facility makes it easy to customise products to client's requirements whenever necessary.

Data Centre - Tier 4 performance

Information Systems managers need to reliably and economically connect switches and routers to servers and storage devices. Local Area Networks and Storage Area Networks use gigabit and 10 gigabit Ethernet, Fibre Channel and ATM to transport data, video and voice packets in huge quantities. Latency, packet loss and of course cost need to be minimised and reliability and up-time maximised.

...10 gigabit Ethernet, ATM and fibre channel guaranteed performance

The advanced network cabling products from Connectix provide the best performance at the lowest cost of all the major suppliers and can guarantee the reliable performance demanded by Tier 4 data centres.

data centre Tier 4 reliability...

Connectix will match the right product to your application to guarantee the most reliable and cost effective transport of your communications requirements for today and tomorrow. Picking Connectix guarantees freedom from cable imposed bit rate errors, excess delay and latency, jitter and inferior electromagnetic pickup and radiation performance. Selection of low flammability and zero halogen compounds also means British and European fire regulations are met when suitable cables are selected for under floor and plenum distribution use.

zero bit error rates, minimal delay, latency and jitter...

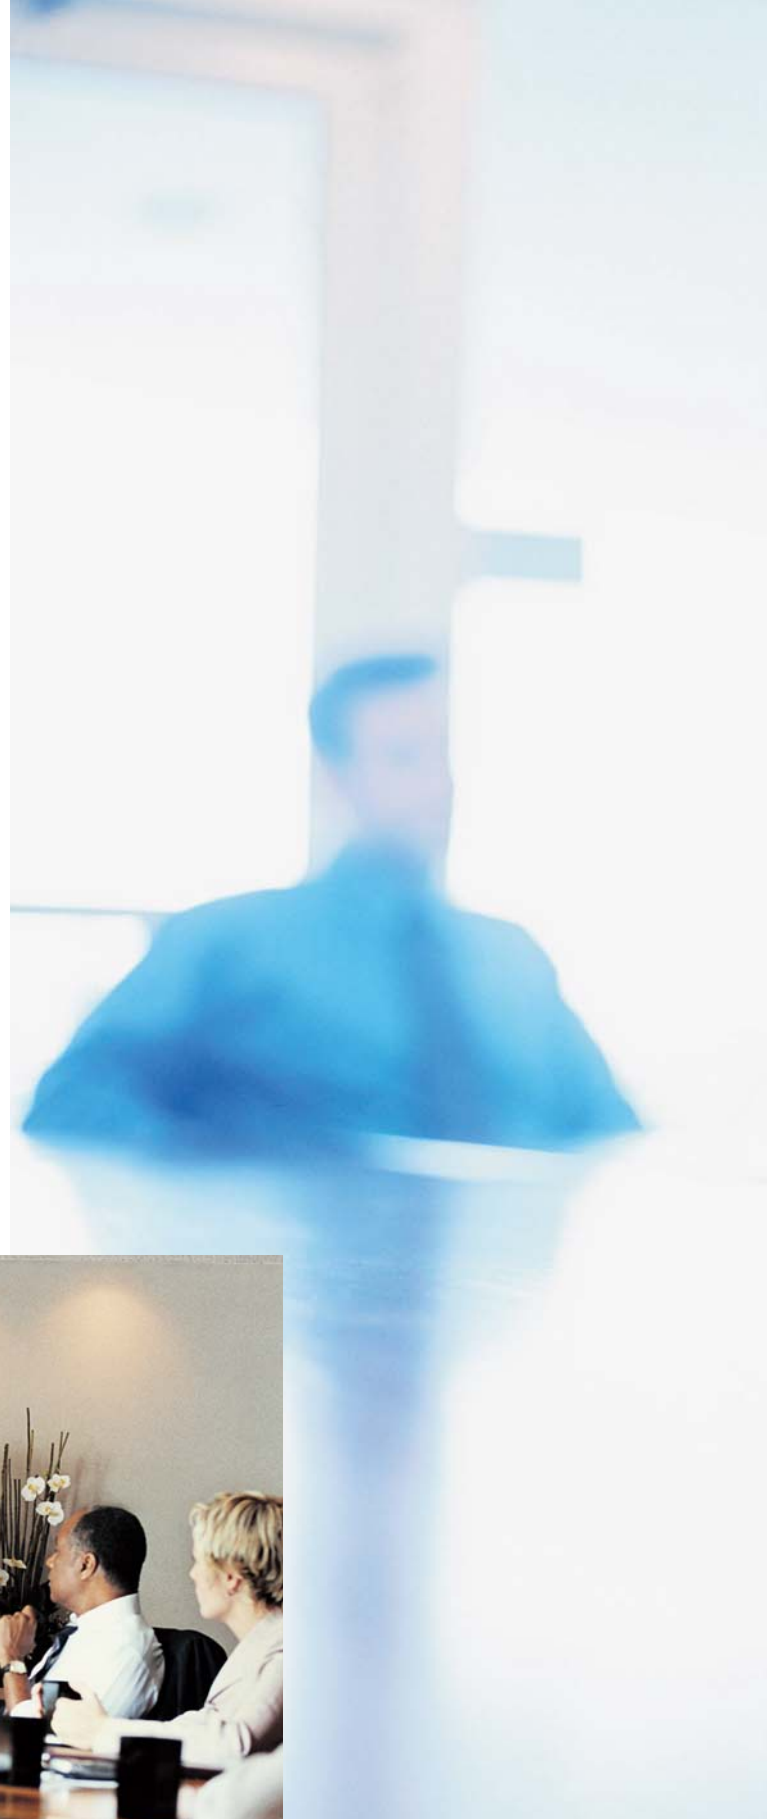

Exceeds standards, *and* with 3rd Party compliance certification

Connectix Net6 cabling exceeds all the current Category 6/Class E requirements from ISO 11801, TIA/EIA-568-B and EN 50173. Connectix is one of the few suppliers who can supply screened and unshielded products across the entire copper product range for additional EMC/EMI performance where required. From 10GBASE-T on copper to 10GBASE-F on optical fibre, Connectix Cabling Systems make all the right connections.

Unlike cut-price suppliers Connectix can prove all claims on system performance by our third party verification certificates, reinforced by a unique in-house 100% testing regime and of course our list of satisfied customers.

Track record

According to BSRIA (Market for Structured Cabling UK March 2007, Volume Tables), Connectix supplies more copper outlets in the UK than any other manufacturer. In fact, one in every 5 outlets installed in 2006 was manufactured by Connectix.

ten million data points and 50,000 customers...

With over ten million points installed at some 50,000 sites Connectix has established a substantial customer base. Two major clients are Kent County Council and Newcastle City Council. Kent County Council, for example, have made a major investment in Connectix products with over 12,000 data outlets installed across computer rooms, data centres and regional offices.

...for offices, data centres and campus networks

Two major clients are Kent County Council and Newcastle City Council. Kent County Council, for example, have made a major investment in Connectix products with over 12,000 data outlets installed across computer rooms, data centres and regional offices.

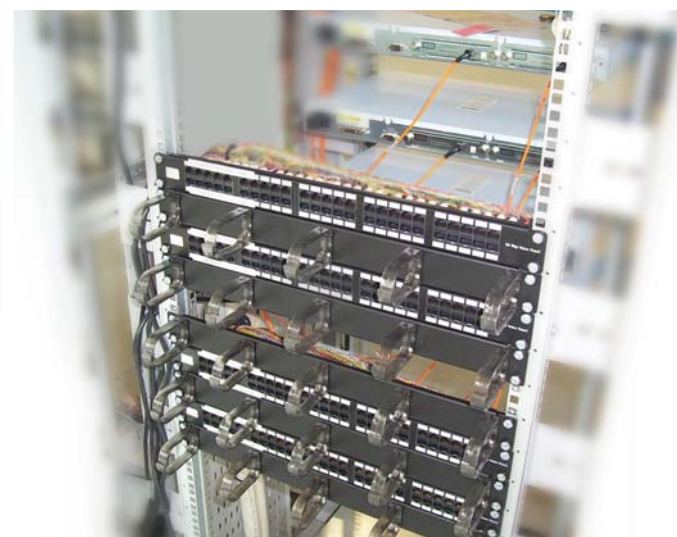

Working with partners such as Patientline, Connectix has installed over 32,000 outlets in 45 hospitals across the United Kingdom.

Industrial giants ABB, LG Electronics, Rolls Royce and Babcock have also recognised that value for money and exceptional performance are possible from the same supplier, and use Connectix for their IT physical layer transport network.

Two of the financial heavy weights Halifax and Royal Bank of Scotland chose Connectix as the preferred manufacturer for their new commercial centre for Ireland.

Government, healthcare, education, financial sector and corporate offices have all placed their faith in Connectix Cabling Systems and continue to do so as we enter the 10 gigabit generation.

Quality control

Quality control

Connectix controls quality right from the start of the in-house production process. Working within an ISO 9001 quality regime, the manufacturing and supply process is rounded off with a unique 100% testing programme. Third part testing and accreditation and certificates of conformity round off the programme to give customers maximum confidence in the reliability of the Connectix system.

Connectix controls quality all the way through the supply chain by only using system integrators trained, approved and authorised by Connectix. A warranty programme gives the

customer the peace of mind to know that the Connectix Cabling System will carry on working as generation after generation of servers, computers and LAN protocols come and go.

Logistics

Logistics

Connectix only supplies direct to installers and system integrators and don't rely on third party distribution. Connectix is in charge of its own distribution and logistics supply chain and can thus guarantee product availability and project support for even the largest and most time sensitive of installations. Connectix maintains stock and operations centres in Essex, London Docklands, Daventry, Birmingham, Edinburgh and Dublin.

**Connectix 'owns'
the supply and
logistics chain**

Support

Connectix, with its headquarters in the UK, is ideally positioned to provide rapid response technical support, site audits and surveys. However with a fully trained and supported reseller organisation any problems that might occur can usually be resolved directly by the system integrator appointed by Connectix.

technical support and training directly from Connectix in the UK

Technical and project management training is provided directly by Connectix to both resellers and end-users.

Affordability

Connectix controls the design, manufacture and distribution of the entire cabling product range. With such a tight level of control, Connectix doesn't need to cut corners in order to reduce costs. Of all the major suppliers into the UK market, Connectix is consistently judged the most cost effective.

Connectix offers superior quality, a broader product range and a quicker response to customers' needs than any other supplier, and at a price that will make you reconsider the value of any existing supplier you may have.

superior performance at a lower price than you are probably used to
